

**RESTORATION ECOLOGIST:** The Tulalip Tribes of Washington currently have a position opening for a full time temporary position. Assists in the coordination, design, and implementation of stream, river, and wetland restoration plans within the Tribes 'usual and accustomed area'. Responsibilities include implementation of restoration projects, obtaining the appropriate local, state and federal permits necessary, monitoring project effectiveness, and the inventory and eradication of invasive and exotic plant species from areas of concern within the Tulalip Reservation. Additional job responsibilities include supervision of technical staff assigned to projects, performing data analysis, reporting results, and grant writing. This is a one year position. Continued employment is dependent upon funding. Minimum education and experience requirements include an M.S. degree in ecology or environmental sciences and two years of project management experience with an emphasis in habitat restoration.
